HIFA.org

Every day thousands of children and adults die needlessly because they do not receive basic life-saving interventions - interventions that are often locally available but are simply not provided due to indecision, delays, misdiagnosis, and incorrect treatment. Many would still be alive today if those responsible for their care had access to basic healthcare information.

Why HIFA is needed

Thousands of children and adults die needlessly *every day* because they do not receive basic life-saving interventions.

These interventions are often locally available but are simply not provided.

Lack of healthcare information/knowledge.

Healthcare Information For All:

“Every person and every health worker will have access to the healthcare information they need to protect their own health and the health of others”

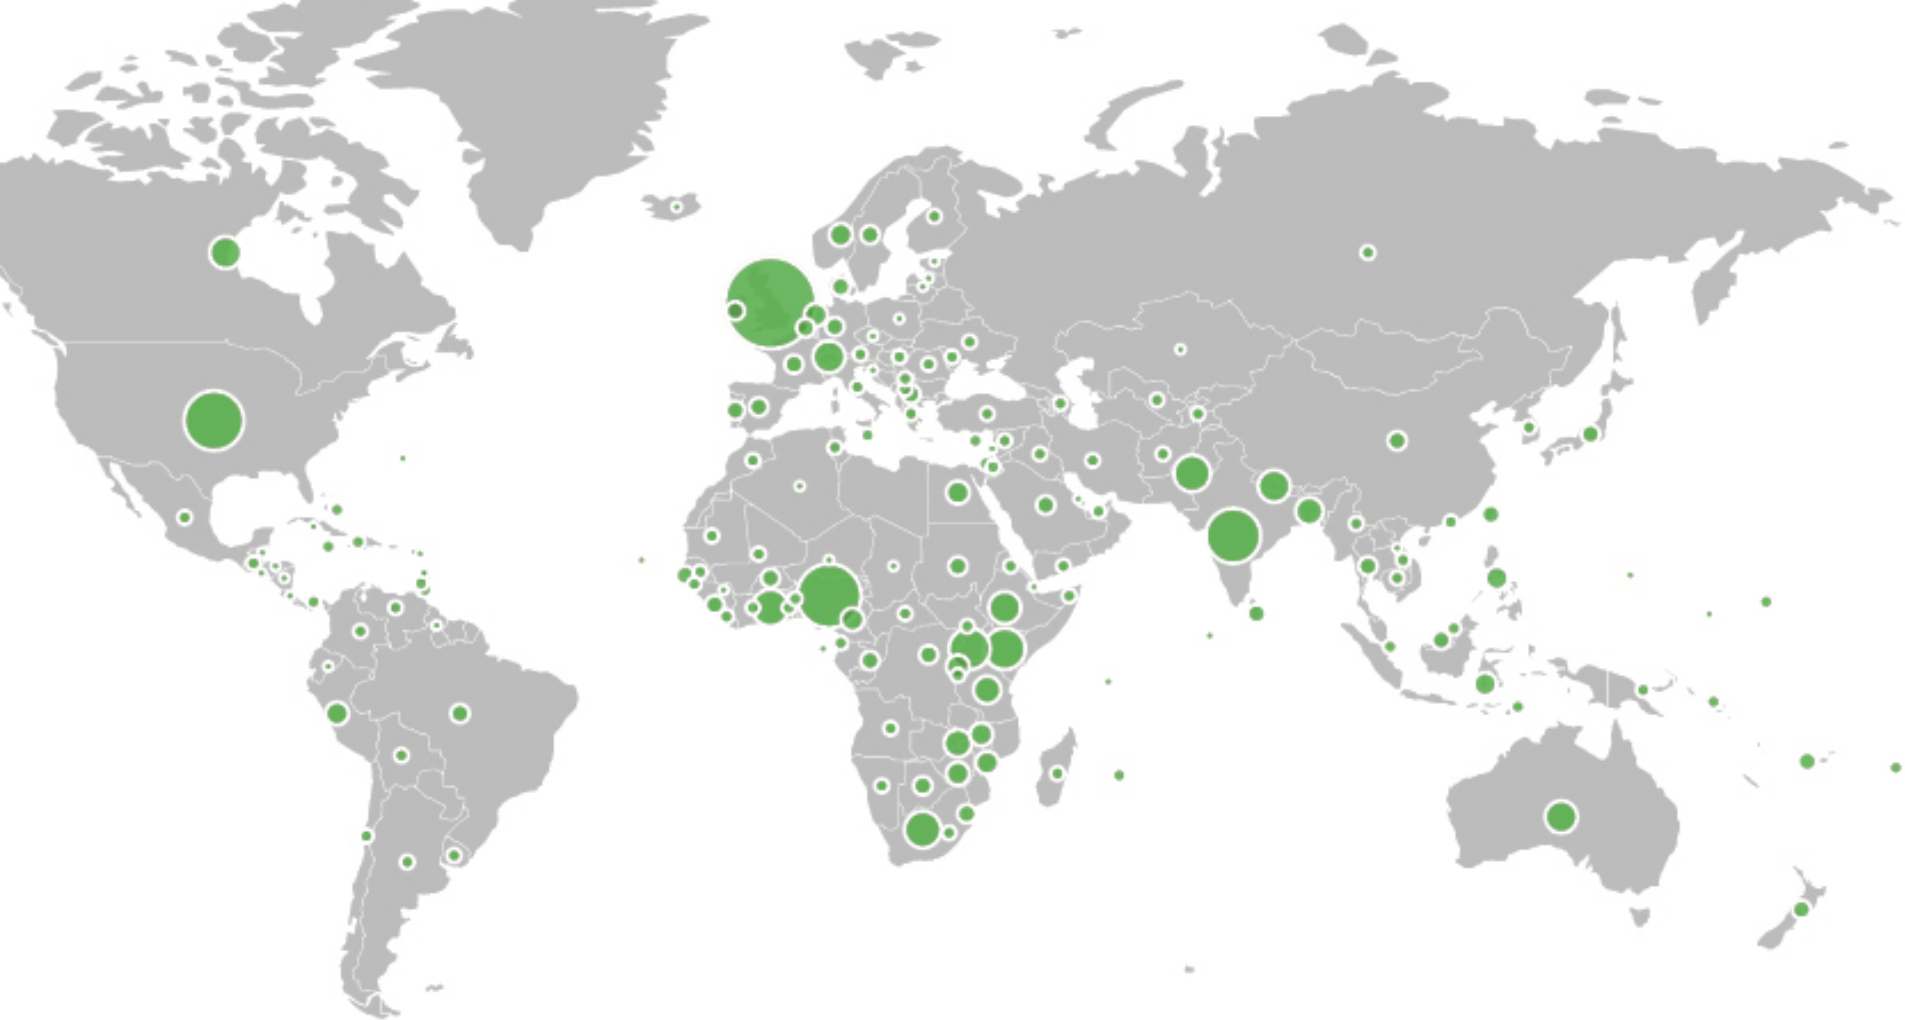

“HIFA is an ambitious goal but it can be achieved if all stakeholders work together.”
